

Maya Chandrasekaran directs the Mercury Project, Policy Innovation Days, and other global health initiatives at the Social Science Research Council. Maya holds a BS in Applied Mathematics from Columbia University and a PhD in Environmental Economics from Duke University, where she studied the value of women's labor and time, resource economics, informal labor markets, and the incorporation of Bayesian methods into quasi-experimental studies. She then worked on a United Nations commission for the economic value of water and wrote a practitioner's book on the value of time in low- and middle-income countries, soon to be published with Oxford University Press. At the SSRC, Maya now specializes in impact evaluations, global health, and ethical and effective survey-based research.
